

PRESS RELEASE

ANDRITZ to reconstruct seawater flue gas desulphurization plant in Vasilikos, Cyprus

GRAZ, FEBRUARY 12, 2018. International technology Group ANDRITZ has been awarded an order by the Electricity Authority of Cyprus (EAC), in the course of an international tender, for reconstruction of the damaged seawater flue gas desulphurization (SWFGD) plant at the Vasilikos power station, Cyprus. The SWFGD plant for the existing heavy fuel oil boiler #3 in Vasilikos was damaged in November 2016 following a catastrophic fire that completely destroyed the flue gas treatment equipment. Start-up of the new system is scheduled for May 2019.

The scope of work includes design, supply, erection, reconstruction, testing, commissioning, and performance testing of the SWFGD plant supplied. The main deliveries are a packed absorber tower made of concrete, a gas-gas heater (GGH) on top of the absorber, upgrade of the existing aeration system, as well as connection to all other existing systems. Upgrade of the existing electrostatic precipitator (ESP) will also enable the plant to comply with the new and stricter emission regulations.

This order once again confirms the strong business cooperation between ANDRITZ and EAC, proven by numerous successful joint projects. A highlight was the Vasilikos rehabilitation project of units #1 and #2 following a devastating explosion at the neighboring naval base in July of 2011 that caused extensive damage.
