

Apprenticeship in mechatronics – automation technician/robotics technician

When you are the link between hardware and software!

Duration of apprenticeship: 4 years

Your work:

As automation technician, you will set up automation systems in mechatronics plants. You will plan and build control systems for individual, computer-controlled machines.

Main focus of training

- Troubleshooting faults by means of systematic error detection
- Installing, starting up and checking components and group assemblies in control engineering.
- Operating, controlling and programming industrial robots.
