ANDRITZ Two-way distributors or Two-way diverters are suitable for distributing a flow of fine and coarse bulk materials. The two-way distributor is designed to operate without leaking of material, like grain granulates and meal products, based on the system specific operating conditions and bulk material properties. Depending on the practical requirements of the bulk material flow direction, the distributor can be operated pneumatically by means of compressed air with rotary air cylinder, as standard, controlled by electrically operated guide valves. The two-way distributor is available as galvanized, stainless steel and as painted version. ANDRITZ two-way distributor is a great complement to our bulk material handling and processing equipment.
TWO-WAY DISTRIBUTOR
TYPE TWD
The two-way distributors are available in five sizes in differences type of angle, which is as 45°/0°, 45°/45°.

The two-way distributors are operated pneumatically by means of compressed air cylinders controlled by electrically operated guide valves.
