ANDRITZ high-performance PrimeDry Steel Yankee are made entirely of steel, contributing to enhanced safety and 8-10% better machine performance when compared to a cast Yankee.

Senior Sales Manager at ANDRITZ ERWIN WALCHER

One of the more recent innovations in stock preparation, the PrimScreen X, improves energy consumption, screening efficiency, and ease of maintenance. This new screen has a top feed stock inlet and a new PrimRotor configuration with new rotor foils to offer unique benefits. Machine and mill automation are addressed through ANDRITZ Automation's Metris technologies for digitalization, simulation, and overall optimization. Smart Solutions for tissue producers include, but are not limited to, automation technologies for predictive maintenance, the Matris UX Platform, Matris Smart Service including the Matris Spare Parts Catalog and Matris CPP (Optimization of Process Performance).

INNOVATION AND PERFORMANCE

To further develop and support its technologies, ANDRITZ continues to make investments in the PrimLineTAC. The tissue pilot plant is available to all tissue producers and suppliers worldwide, and also to partners and institutions within the tissue value chain. For example, the latest machine design, PrimLineTEX, was developed and tested at the tissue pilot plant. It enables the production of premium textured tissue with a quality very close to TAD. The PrimLineTEX tissue machine is of utmost flexibility; it can be configured as a "pure" textured machine or as a machine that can produce either dry-crape or textured tissue.

MEET OUR TISSUE EXPERTS!

Our tissue experts, their knowledge, passion, and excitement, are what make the difference for our customers when it comes to best-in-class tissue technology, production equipment, and service.

ANDRITZ Papillon refiner with its compact cylindrical rotor design

ANDRITZ is always exploring ways to take the ever-important issues of Health & Safety to new levels. We have recently launched the internationally recognized IOSH Managing Safely courses for all employees engaged in responsible positions within our pulp and paper activities around the globe.

The Institution of Occupational Safety and Health (IOSH) is an international chartered professional body for Health & Safety in the workplace. Formed in 1945, the UK based institution acts as a champion, adviser, advocate, and trainer for health and safety professionals working in all organizations, and has over 41,000 members from over 120 countries.

The IOSH has become leader of a profession that has transformed the world of work, making it a safer and healthier place to be. Its vision is very simple: a safe and healthy world of work.

ANDRITZ is now running regular IOSH Managing Safely courses, which are tailor-made for ANDRITZ professionals, in particular project managers, site managers, supervisors, and QHSE. The training consists of a variety of modules, including identifying hazards, assessing and controlling risks, investigating accidents and incidents, and measuring performance. In addition, the course provides relevant information directly related to ANDRITZ common site risks, including working at height, confined spaces, traffic management, permit to work, and use of lifting equipment.

The IOSH Managing Safely courses are an intermediate level, which run for three full days. The courses have a maximum of 20 places – a requirement of the institution – as this allows learning in the most effective manner, and also allows the individual attention needed.

We have challenges when arranging the courses, as the nature of project management means that the people we want to train are spread all over the world. However, such is the importance and interest in the course that we are really pleased to have already trained and certified more than 100 project staff and have planned two more courses this year in Helsinki, Finland and Graz, Austria.

The training itself contains standard material with guidelines that have to be strictly adhered to, and cannot be altered or removed. However, additional information regarding specific ANDRITZ rules, instructions, and operational processes are included to make the training even more relevant for our organization.

One authorized, qualified, and competent IOSH trainer conducts the course with great enthusiasm and excellent communication skills. The same trainer runs all ANDRITZ courses to ensure a uniform and effective teaching approach. The course includes a series of presentations with open discussions, where delegates are constantly involved, relating their own experiences. There are also dedicated workshops in which all delegates take part. The three-day course finishes with a final exam, one hour in length, containing 30 multi-format questions and a practical project. Only successful delegates are awarded an IOSH Managing Safety certificate.

Graduates of recent IOSH training in Germany and Austria.

Our experience of the IOSH Managing Safety course so far has been very revealing. By the second day, it is evident that the delegates have discovered a whole new world of Health & Safety guidelines, and they are keen to go out and put into practice all they have learned. It is our aim at ANDRITZ to make IOSH courses the basic training for all professional staff in roles that involve Health & Safety in our pulp and paper projects, workshops, and offices all around the world.
