We provide you with tailor-made environmental solutions focusing on reduced emissions and improved performance and efficiency to meet changing market conditions and comply with asset strategies. Our offering covers the entire flue gas line, ranging from particulate control, dry and wet scrubbers, to multi-pollutant equipment for industrial, waste-to-energy and power generation plants. Thanks to our wide portfolio of best available technologies for various industrial processes, innovativeness in engineering, excellence in project execution and regional proximity for service activities, ANDRITZ is your right partner when it comes to compliance with emission regulations and lifecycle optimization of your Clean Air Technologies equipment.
