DEBARKING TOOLS

CAMPRO AND CRESTOOL

ANDRITZ

ENGINEERED SUCCESS

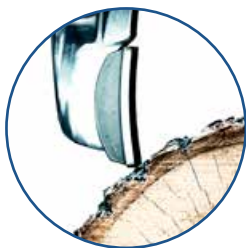

Innovation through heritage

At ANDRITZ we integrate innovative thinking and modern technology with centuries of manufacturing heritage. And we aim to provide top-quality chipping and debarking tools to sawmills and the forest industry for centuries to come.

Debarking power and productivity

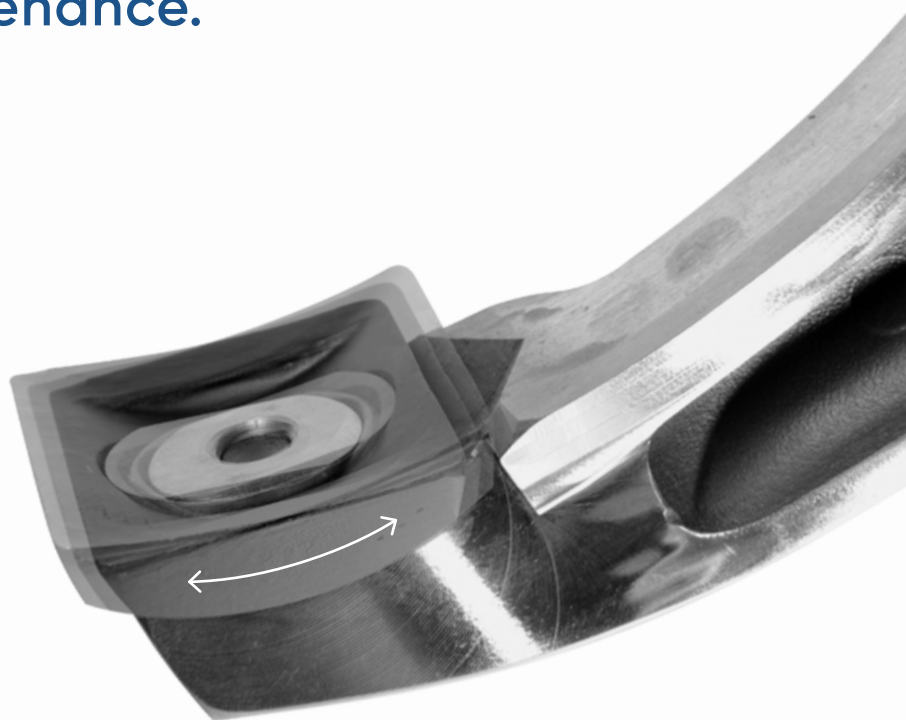

Campro and Crestool equipped with our innovative tips brings higher profitability into the debarking process.

Take a lead over your competitors through faster log infeed and fewer wood losses. Equip both old and new debarking machines with our tools and improve performance through more reliable debarking and easier maintenance.

VERSATILE TIPS

The adjustable pitch on the Crestool tip is just one of our innovations reducing the need for multiple tip models in inventory.

Campro

Campro is a high performance debarking tool, which comprises debarking tips and advanced tool holders. Its superior strength and lower weight result in a smoother debarking operation by reducing tool tension. The W-shaped profile adds strength and efficiency, reducing maintenance costs and increasing productivity.

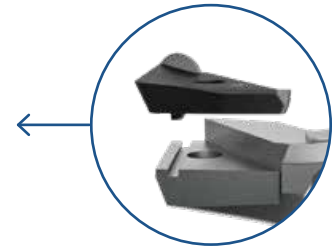

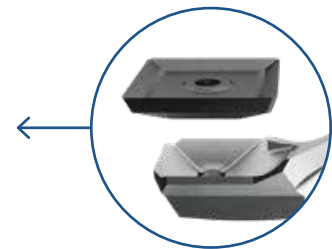

The Campro system is designed for **18"** (457 mm), **20"** (508 mm), **24"** (610 mm), **26"** (660 mm), **30"** (762 mm) and **31"** (787 mm) ring debarkers.

PYRAMO TIP

This reversible and interchangeable faithful servant has been the first choice for many sawmills since the eighties, much thanks to its reliability and productivity. The Pyramo tip is available in several versions to suit any debarking condition – all year around.

TRIMAX TIP

With its superior quality, low weight and high stability the Trimax tip is the optimal long-life partner for your Campro tool. The slimmed design reduces wood damage and it can be sharpened up to three times. Trimax is also available in several versions to suit your specific setup and conditions.

Crestool

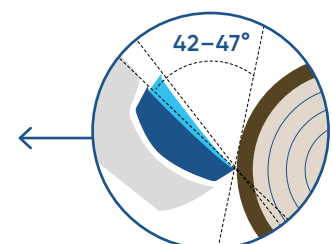

The superior strength and low weight combination contribute to smooth operation by reducing tool tension. An innovative system designed to improve the debarking process, reduce maintenance costs and increase productivity while standing up to the toughest debarking conditions.

The Crestool system is designed for **17"**, **22"** and **27"** ring debarkers.

The 17" model (a) has an interlocking tool and hub with integrated key on the backside, this transfers loads directly into the hub and eliminates bolt shearing. The 22" and 27" models (b) have a strong and secure tool mounting with better load transfer capabilities from tool to hub.

INNOVATIVE CRESTIP

The double sided Crestip has an adjustable angle (pitch) to suit different debarking conditions, thus reducing the need for multiple tip models in inventory.

Minimized fiber losses

Large variety of lightweight
and customizable debarking
tools and tips

Safety and quality

High safety standards,
professional installation
and long experience

Lower lifetime costs

Best possible configuration
for optimized debarking result,
long lifetime of the tips and
PartnerChip service program

ENGINEERED SUCCESS

Wood processing is an essential part of production in the forest products industry and ANDRITZ is focused on being your essential, dependable service partner. A key competence is our ability to innovate. Our specialists are skilled in helping you install, upgrade, and renew the essential components of your wood processing systems to improve performance and reliability with value-added enhancements.

We are passionate about engineering success for our customers by innovating solutions that not only process wood efficiently, but do it in a safe, reliable, and environmentally sound way – at the lowest cost of ownership. If this is the kind of success you desire for your plant, we can help you engineer it.
