

ANDRITZ RollBrush

Cleaner roll surfaces for higher process efficiency

The RollBrush is a mechanical cleaning device that can be installed on a doctor in place of the doctor blade. It directly eliminates roll or cylinder surface contamination, preventing critical build-ups and

doctoring performance losses. The system is particularly suited for paper grades that require consistent roll surface conditions. Over time, build-up can lead to quality loss and reduced process efficiency.

The ANDRITZ RollBrush addresses these effects at their source. By enabling off-line cleaning, the system keeps rolls in optimal condition while reducing the need for external maintenance.

ANDRITZ

RollBrush – Benefits at a glance

HOW IT WORKS

The ANDRITZ RollBrush system operates with a cleaning pad that maintains controlled contact with the rotating roll surface. It actively removes deposits and process related build-up while conditioning the roll surface structure. The action develops consistent surface characteristics.

The system can be incorporated into existing doctoring positions allowing a straightforward upgrade with no mechanical changes.

It is especially suited for applications where surface condition has a direct impact on paper quality.

KEY FEATURES

- **Easy integration:**
Fits into any type of blade holder
- **Fast installation:**
Quick to mount and remove
- **Flexible operation:**
Allow adaptation to different process needs
- **Various pad types available:**
Depending on contamination and surface requirements
- **Wide applicability:**
Suitable for different roll diameters and machine configurations
- **Consistent cleaning contact:**
Uniform pressure across the roll width

BENEFITS

- Superior roll surface cleanliness for consistently high-quality output
- Fewer rejects by eliminating build-up at the source
- Extended roll/cylinder service life
- Stable machine performance
- Reduced maintenance effort and improved uptime
